

QUOTEWISE LIVE DEMO - CUSTOMER SCOPE

Residential water-heater replacement

Prepared for comparable vendor estimates - not a vendor quote

PROPERTY AND EXISTING EQUIPMENT

Service location / ZIP: Charlotte, North Carolina 28202
Property: detached house, approximately 28 years old
Equipment: 40 US gallon natural-gas tank water heater, installed in 2012
Location: ground-floor garage on a slab foundation; standard doorway
Observed issue: slow leak at the tank base and intermittent hot water
Water lines: copper; existing gas connection and metal vent are visible

REQUESTED SCOPE

Disconnect, drain, remove, and haul away the existing tank
Supply and install a like-for-like 40 gallon natural-gas tank heater
Reconnect existing water, gas, and vent lines; test for leaks and startup
Include drain pan and drain connection; add expansion tank only if code requires it
Show labor, equipment, materials, permit, disposal, and warranty separately
No fuel conversion, equipment relocation, or after-hours work is requested

SITE AND ACCESS

Floor: 0 (garage); crawlspace: no; slab foundation: yes; tight access: no
Driveway parking is available next to the garage; work area will be cleared
Only the water heater is affected; no prior repair has been attempted
Photos are not included with this scope document

prior_repair_attempted: false
photos_available: false

CONFIRM IN THE BRIEF VOICE INTAKE

1. Urgency: is service needed this week, or is scheduling flexible?
2. Is the main water shutoff location known, accessible, and operational?
3. Which normal-hours weekday access window works best?

Intake note: all listed facts may be reused verbatim across every vendor call.
